

POGO[®] mini

Patented sensor instantly measures moisture, EC (salinity) and canopy temperature.

Extremely durable with an Industry-leading warranty.

Integrated Bluetooth for easy operation with free smartphone app.

Less than the cost of a typical moisture-only sensor.

Simple spot measurements. Easy on your budget.

POGO mini is ideal for courses that already harness the power of cloud-based mapping of course conditions with the POGO Pro, but require additional sensors for spot measurements.

For less than the cost of a more fragile sensor that measures moisture only, the POGO mini can give you all 3 parameters critical to managing turf health while using less water and fertilizers.

It has the same patented sensor as the POGO Pro and the same 2-year warranty.

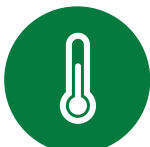

Why buy a moisture sensor when you can measure all 3 influential turf variables for less money?

MOISTURE

SALINITY (EC)

CANOPY TEMPERATURE

The top extension is sized to fit most hiking poles to provide height-adjustable comfort when taking samples.

Get location-based visual analysis with POGO Turf Pro Cloud and the more powerful POGO Pro.

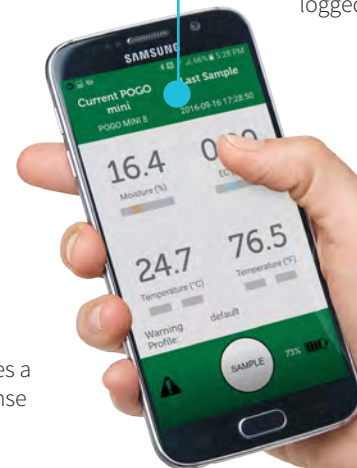

Integrated Bluetooth wireless radio lets you easily connect any Apple or Android device running the free app.

The free app lets you control the POGO mini via a wireless Bluetooth connection. Samples are analyzed according to your customized desired range, displayed and logged.

Consistent accuracy without the need to calibrate, ever. The durable sensor and marine-grade stainless steel probes are covered by an industry-leading 2-year warranty.

Rechargeable battery provides a full day of intense use between charges.
